

Partner Services

HP Data Protector v6.0 Packaged Demonstration

DESCRIPTION

A Partner Services consultant will demonstrate a typical Data Protector environment consisting of standard files, MS Exchange databases and MS SQL databases.

DELIVERABLES

Demonstration of the following:

- Overview of Data Protector Graphical User Interface
- Configuration of storage devices for use within Data Protector (MSL5000 Library, DP File Jukebox and HP Virtual Tape Library) and Media Pools
- Creation of a backup specification for file system backups
- Creation of a backup specification for SQL and Exchange online database backups
- Creation of a backup specification for file systems and sql online database backups using DP Zero Downtime Backup (ZDB) functionality
- Data Protector Object Copy functionality (backup to disk then copy to tape)
- Restoring data (Standard files, MS SQL databases and MS Exchange databases using MS Exchange Recovery Storage Group)

CUSTOMER BENEFITS

The customer will benefit from the technical experience and expertise in a guided demonstration.

The customer will have confidence they can proceed with the product evaluation with the knowledge gained from the demonstration

The customer will benefit from a full interactive session with the ability to 'have a go themselves' if desired.

The customer will save time and future discrepancies that may otherwise occur from an unguided, literature based product brief.

ENVIRONMENT

The Data Protector demonstration will consist of:

- All demonstration servers will be installed with MS Windows 2003
- Using HP 20p series Blades and HP Proliant DL servers
- Fibre attached to HP SAN
- Fibre connected shared SDLT tape library
- Fibre connected HP VLS6000
- Disk staging to an HP EVA storage array
- MS Exchange 2003 Network Client
- MS SQL 2000 Network Client
