

Partner Services

TotalStorage Productivity Centre for Data V3.2 Packaged Demonstration

DESCRIPTION

A partner services representative will demonstrate a typical TotalStorage Productivity Centre for Data configuration around a heterogeneous environment of Windows, Linux and UNIX servers.

DELIVERABLES

Demonstration of the following:

- Accessing the Graphical Interface
- Create file constraints
- Create User quotas
- Create various reports of data usage, access load, file access, unprotected files.
- Create an asset report
- Create a usage violation report
- Show “push button” integration with IBM Tivoli Storage Manager
- Create availability reports in line with service level agreements (SLA's)
- Create a filesystem free space report with trending analysis
- Create out of space alerts
- Active Management – automatically extend an AIX JFS filesystem

CUSTOMER BENEFITS

The customer will benefit from the technical experience and expertise in a guided demonstration.

The customer will have confidence they can proceed with the product evaluation with the knowledge gained from the demonstration.

The customer will benefit from a full interactive session with the ability to ‘have a go themselves’ if desired.

The customer will save time and future discrepancies that may otherwise occur from an unguided, literature based product brief

ENVIRONMENT

TotalStorage Productivity Centre for Data will be installed on a partition of a system p p550 server. The systems being monitored and managed will be a mixture of Windows 2003 server, SUSE Linux servers and IBM AIX servers.
